### Mission Statement

To produce the highest quality free enterprise wide healthcare information system

## 1. Motivation

World wide, few hospitals can afford an integrated healthcare information system to manage patient visits, results, medications and other clinical or administrative tasks.

Our mission is to remove one obstacle - the high cost and complexity of clinical information software. By leveraging the global resource network of healthcare institutions, universities, vendors and individuals, we will design and build a high quality clinical information system for every country seeking a low cost solution.
